

Got it. We'll move in two clean strikes:

1. GitHub Repo Layout (Production-ready, scalable, modular)

2. Phase 0 Workbook Blueprint (tab-by-tab, ready to build in Sheets or Excel)

=====

1. GITHUB REPO LAYOUT (ALLMIGHT v2.0.1 — SCALABLE EDITION)

=====

This layout is future-proofed for:

AI agents

multi-module engines

flashloan execution

arbitrage routing

Ubuntu + VS Code

remote dashboard (FastAPI + Tailscale)

GPU acceleration

backtesting / sim

on-chain data pipelines

And cleanly separates strategy, data, models, execution, and infrastructure.

📁 ROOT STRUCTURE

★ Why This Repo Layout Works

Clear separation of domains (macro, structure, liquidity, trend, etc.)

Supports modular engine loading

Allows future ML integration without bloating core

Ready for production and versioning

Easy for mobile development

Matches the hierarchical Master v2.0.1 architecture

Enables remote dashboard access

Easily scales for GPU-heavy workloads later

This is the exact structure you would expect from a boutique quant trading team.

=====

2. PHASE 0 WORKBOOK (FINAL BLUEPRINT)

=====

This workbook is your single source of truth for:

manual scoring

rule testing

engine verification

MCS calculation

Phase 0 paper trading

logic debugging before writing code

Below is the complete final layout.

MASTER WORKBOOK TABS (REQUIRED)

I'll list each tab with:

Purpose

Inputs

Outputs

What the operator does manually

You can replicate this in Google Sheets or Excel TODAY.

TAB 0 — MASTER LIBRARY

Purpose:

Glossary, definitions, rule references.

Contents:

all engine inputs/outputs

scoring ranges

regime definitions

volatility definitions

OB/sweep definitions

all threshold values

TAB 1 — SSP (Pure Structure Engine)

Inputs:

HH/HL/LH/LL

BOS/CHOCH

swing points

Outputs:

StructureBias

StructureScore

Manual:

Fill structure readings per candle sequence.

TAB 2 — Institutional Pressure Engine

Inputs:

momentum

divergence

money flow

volatility pressure

Outputs:

PressureScore

Manual:

Rate each element from 0–3.

TAB 3 — Sweep Engine

Inputs:

equal highs/lows

liquidity clusters

stop hunts

Outputs:

SweepScore

Manual:
Mark which sweeps occurred.

TAB 4 — AMD Engine (Accum/Manip/Dist)

Inputs:

accumulation range

manipulation wick

distribution breakout

Outputs:

AMDScore

Manual:
Identify AMD state visually.

TAB 5 — Market Cycle Engine

Inputs:

cycle shape

volatility

liquidity shifts

Outputs:

CycleScore

TAB 6 — Fractal Trend Engine

Inputs:

fractal stages

swing aging

Outputs:

FractalTrendScore

TABS 7–16 — LIQUIDITY BRAIN

These are the most important.

7. Liquidity Architecture

Inputs:

memory zones

liquidity shelves

Outputs:

MarketMemoryScore

LiquidityPocketScore

VolumeImbalanceScore

8. Imbalance Architecture

Inputs:

FVGs

volume voids

Outputs:

VolumeGapScore

RebalanceScore

9. Dynamic Liquidity Map

Outputs:

TrapScore

DynamicBias

10. OB Quality

Outputs:

OBQualityScore

11. SR Quality

Outputs:

SRQualityScore

12. Pattern Density

Outputs:

DensityScore

HighConvictionFlag

13. Execution Footprints

Outputs:

AlgoFootprintScore

14. Liquidation Engine

Outputs:

LiquidationReversalScore

15. Orderflow Projection

Outputs:

ExpectedAbsorptionProbability

ExpectedBreakProbability

16. Liquidity Shock

Outputs:

ShockProbability

TABS 17–21 — TREND BRAIN

Each tab outputs a trend score.
You record:

trend direction

trend confidence

predictive turnpoints

TABS 22–28 — VOLATILITY & RISK

22. Volatility Forecast

23. Volatility Envelopes

24. Variance Scaling

25. Tail Risk

26. Scenario Testing

27. Black Swan

28. Equity Intelligence

Outputs:

volatility regime

risk mode candidates

hazard levels

TABS 29–33 — EXECUTION

Includes:

RouteSafetyScore

Slippage/gas limits

MEV risk

Flashloan safety

MicroScalp

Directional Impulse

TABS 34–39 — PREDICTIVE BRAIN

Each tab holds:

anomaly severity

micro-pattern confidence

Pattern DNA

Regime DNA

Transition forecast

SynthesisSignalStrength

TurningPointScore

TABS 40–45 — REGIME + WEIGHTING

40. Regime Classification

41. Weight Profiles

42. Genetic Weight Evolution

43. Liquidity Migration

44. Macro-Micro Bridge

45. Cross-Market Triggers

TAB 46 — MCS (MASTER CONFLUENCE SYSTEM)

This is the main tab.

Formula:

$$\text{MCS} = \Sigma(\text{EngineScore} \times \text{EngineWeight} \times \text{RegimeWeight} \times \text{VarianceScale} \times \text{DecayFactor})$$

Outputs:

Final MCS score

Trade mode

TAB 47 — COST MODEL

Estimate:

gas

slippage

MEV

bridge cost

TAB 48 — TRADE AUTHORIZATION

Checklist:

Macro OK?

Structure OK?

Liquidity OK?

Trend OK?

Predictive OK?

Risk OK?

Execution OK?

Cost OK?

MCS OK?

If all true → Trade allowed.

TAB 49 — WEEKLY INCOME SYSTEM

Tracks:

weekly profit

withdrawal targets

allocation rules

TAB 50 — CAPITAL SEGMENTATION

Tracks:

operational capital

metals

ISO rails

dividends

emergency

TABS 51–54 — SURVIVAL & FAIL-SAFE

Contains:

Safety Mode

Survival Mode

Fail-safe triggers

Crisis Tilt projections

TAB 55 — OPERATOR PERFORMANCE

Daily evaluation:

fatigue

stress

environmental distractions

readiness

discipline

Adapted from Infinite Grit.

TAB 56 — DAILY CHECKLIST

Every day operator checks:

Regime

Macro

Volatility forecast

Liquidity alignment

Trend alignment

Predictive signals

Risk mode

Execution safety

MCS threshold
